Protect your porcelain service, protect your investment

At Costa Verde, we do not only worry about developing products that meet your own needs, it is our double worry to inform you on how to protect your porcelain product and to make it last for a long time.

All our products are regularly tested and follow several national and international standards, with the ultimate goal of ensuring a quality product and a safe investment. By acquiring Costa Verde's porcelain items, you are choosing professional and resistant products, for daily and massive use, in the oven, fridge, dishwashing machine and microwave (not possible when decorated with metal motives).

Below we are sharing you some suggestions that will undoubtedly help you to protect your investment.

- Always use 18/10 stainless steel cutlery;
- Cover the porcelain storage and handling zone with polypropylene surfaces, thus avoiding contact with metal surfaces or others;
- Do not draw your porcelain over uncovered metal surfaces, for it favours metal migration onto the porcelain base;
- Do not pile articles which were not developed for that purpose;
- Separate the porcelain items from other different material products, such as cutlery or metal ware in washing and drying;
- Always use silicone spatulas;
- Make a prewashing porcelain process or live it underwater before the washing;
- Use specific detergents and do not force a contact between them and the porcelain for a long time.

Keep your Costa Verde product just as in its first day!
